

## Training program

# Render PRO Module\*

1. Analysis of the interior designs on the basis of which the training will be carried out.
2. The basic setting of light parameters.
3. Making basic visualization with a saving the effect in jpg format.
4. Discussing the Render PRO functionality with the division into Radiosity and Path tracing calculations.
5. Making Radiosity calculations during the process:
  - the rightness of using scene diagnostics and repairs,
  - setting the Global Illumination parameters,
  - application of colour tones,
  - creation and saving visualization with a view outside the window,
  - change of light parameters.
6. Final gathering - explanation of the application.
7. Using the Ray tracing option.
8. Making a photo in a visualization using Radiosity calculations.
9. Path tracing, functional overview, comparison with Radiosity calculations:
  - making a photo in a visualization using the saving a several views at the same time.
10. Export of visualization to CAD Share-it application and obserVeR application.
11. Functions and saving of the camera path.
12. Presentation of the design in the form of the AVI movie.
13. Checking knowledge and questions.

\*The 1-day training is carried out during 4 hours, including 15 minutes for a break.  
Courses are organized by CAD Projekt K&A on the terms specified in the training regulations.
